SUMMARY

Product designer with six years across a seed-stage startup, an agency, and enterprise fintech. Designed an entire MVP end to end at a two-person-design startup, then spent four years at Bank of America leading design on flows handling six figures of annual transactions. Designs in Figma, builds working prototypes with AI coding tools, and is comfortable being the only designer in the room. Looking for a smaller team and a shorter distance between deciding something and shipping it.

EXPERIENCE

Bank of America — Merrill Edge

Senior Product Designer, AVP — Consumer Investing

San Diego, CA

Oct 2022 — Present

- Design lead on Transfer of Assets, an end-to-end flow handling roughly 100K transfers a year. Only half currently complete without manual intervention — the work is finding where people drop off, abandon, or call support, and designing those failure points out.
- Build net-new UI on an open-finance API pulling account data from external institutions. The data comes back inconsistent, so the interface has to detect what is missing and collect it inline rather than dead-ending — a design problem and a data problem at once.
- Co-lead a \$4.7M program across 34 pages: audited a sprawling footprint, found where different teams had built the same thing twice, and killed or merged 11 of them while cutting screen count 25% and getting everything onto one design system.
- Own the whole arc — discovery, flows, high-fidelity UI, engineering handoff, and the executive presentations that get the work funded. Mentor one designer and set the content timeline for the writers on my projects.

Sizigi

UX/UI Designer — seed-stage startup

San Diego, CA

Jun 2020 — Sep 2021

- First and only designer. Designed the entire MVP — job tracker, public profile, analytics dashboard, homepage, notification center — and worked directly with the dev team to get it live.
- Built the brand and visual system from scratch, applied across every channel.
- Made the product demos for the WeFunder seed campaign, which raised \$111,621 from 102 investors.

Metajive Design Corp

UX Designer — agency, contracted to Bank of America

San Diego, CA

Sep 2021 — Oct 2022

- Worked on merging five separate banking apps into one product — Bank of America, Merrill Lynch, Merrill Edge, Benefits OnLine, and Private Bank. It drove 142,000 new app referrals and moved 43% of multi-brand clients onto a single app. BofA hired me off the project.
- Shipped IA, wireframes, prototypes, and production UI for tech, healthcare, and security clients on tight agency timelines.

THINGS I BUILD

- Inbox Cleaner — designed a Gmail management client and built it with AI coding tools. Sortable views, bulk actions, floating action bar, dark mode. Working software, not a Figma file.
- Plain-English Decoder — designed and built an app that rewrites dense documents into plain language, with a side-by-side view for checking the rewrite against the original.
- GWOWNUPS — lead a 60-person dance performance group that competes and performs in showcases. Recruiting, casting, rehearsal cadence, production. Nobody is paid and people keep coming back.

SKILLS

End-to-end product design · 0→1 and MVP design · Complex workflows · Design systems · Rapid prototyping · Visual & interaction design · Accessibility · Working directly with engineers · Figma · AI-assisted building

EDUCATION

San Diego State University

B.S. Economics, focus in Quantitative Analysis

Cum Laude
